

1. To navigate programmatically in function component
Create a history object
let history=useHistory()
And then use push
history.push("/list")
2. How to make button clickable
Import {Link} from 'react-router-dom'
<Link to="/">
<button type="button" name="btn">click me</button>
</Link>

To write full stack application we need to connect to a web service,
The data will come from web service
For that we may use any one of the following framework

axios, http, fetch

1. npm install axios
2. install bootstrap
3. Step 1
4. `npm install react-bootstrap@next bootstrap@4.6` -save

step 2:

add following in index.html file after line 17

```
<script src="https://unpkg.com/react/umd/react.production.min.js"
crossorigin></script>

<script
  src="https://unpkg.com/react-dom/umd/react-
dom.production.min.js"
  crossorigin></script>

<script
  src="https://unpkg.com/react-bootstrap@next/dist/react-
bootstrap.min.js"
  crossorigin></script>

<script>var Alert = ReactBootstrap.Alert;</script>
```

Step 3:

add following line in App.js

```
import 'bootstrap/dist/css/bootstrap.min.css';
```

```
npm install react-bootstrap-icons
```
