Javascript	JQuery
Document.getElementById("myid")	$('#myid')

Arr=Document.getElementsByTagName("div")
For(var ob of arr){
    Ob.setAttribute("style","color:red");
}
	$("div").css("color","red")
	$("div,p").css({
	    "color":"red",
	     "border":"2px solid red"
	})

Parr=document.getElementsByTagName("p")
For(var ob of parr){
    Alert(ob.innerHTML);
}
	$("p").each(function(element){
	    Alert($(element).html())
	})

Parr=document.getElementsByClassName("myclass")
For(var ob of parr){
    Alert(ob.innerHTML);
}
	$(".myclass,div).each(function(index){
	    $(this).html();
	
	}
	)

addEventListener ---this is browser specific addEvent ---- works with IE	On off

Ajax request---following methods are used to send AJAX request

5 methods

1. GET-------- READ
2. POST------Add data into database
3. DELETE----- delete data
4. PUT---------- update data
5. PATCH --------- update data---partial

Plugins

In jQuery there are 2 types of plugins, function plugin and closure plugin

Function plugin

  (function($){

  $.fn.highlight=function(background,foreground){

  return this.each(function(){

     $(this).css({

         "background-color": background,

         "color": foreground;

```
                    "font-face":bold;

            })
        })
    }
})($)
```
